# Upper York Sewage Solutions Individual Environmental Assessment

Servicing Tomorrow's Communities

The Upper York Sewage Solutions (UYSSolutions) project is about development of a sustainable sewage servicing solution in accordance with the *Environmental Assessment Act* and all applicable government legislation. This infrastructure is to accommodate and manage projected approved growth in the Towns of Aurora and Newmarket, and the Communities of Holland Landing, Queensville, and Sharon.

## Environmental Assessment Process

At these drop-in Public Information Forums, you will learn about the UYSSolutions Individual Environmental Assessment (IEA) process that York Region is required to follow. Share your ideas on what opportunities and solutions should be considered, what features in your community are important to you and how we can best involve the public in a meaningful way throughout the UYSSolutions IEA process. Additional Public Information Forums will be held at key points throughout the UYSSolutions IEA process to receive your input.

You're invited to comment on the first step of the IEA process - the development of Terms of Reference (ToR). The ToR sets out the proposed framework to be followed during the second step - preparation of the UYSSolutions Environmental Assessment report. Visit the project website ([www.uyssolutions.ca](http://www.uyssolutions.ca)) for additional information, news, and project documents as they become available.

## HOW ELSE CAN YOU GET INVOLVED?

Visit the project website ([www.uyssolutions.ca](http://www.uyssolutions.ca)), contact one of our project managers, or drop in to the Project Office at 1195 Stellar Drive Unit 1, in Newmarket for Tuesday Talks on the first Tuesday of every month between the hours of 6 and 8 p.m. - See you then!
